

Tests for UI, Features:

Youtube videos not currently embedded within program

Current buttons need programming:

When Exit, allow the port to be used by other applications

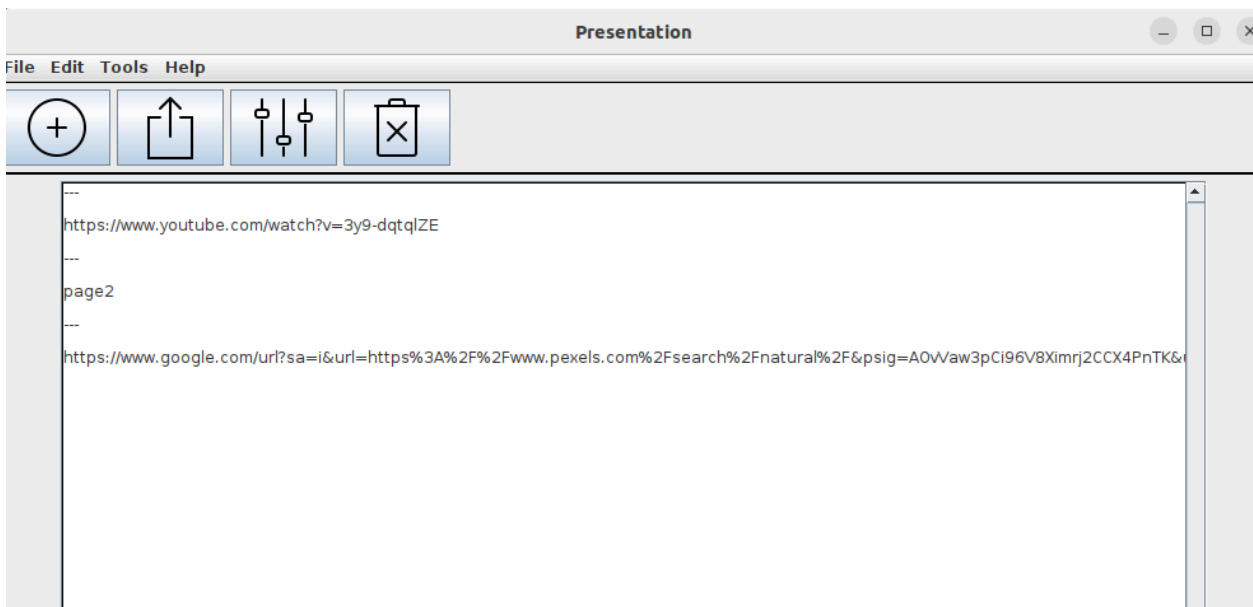

Execution Settings

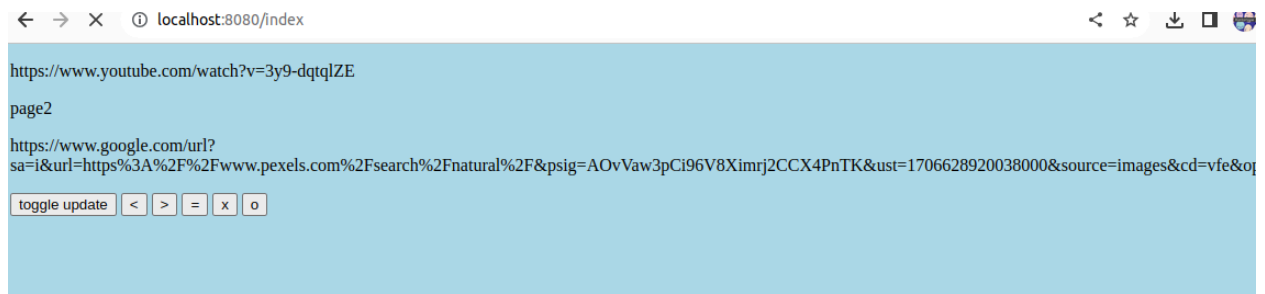

About Us

Markdown Guidelines

All of edit, tools and Help

Embedding Image URL not working atm

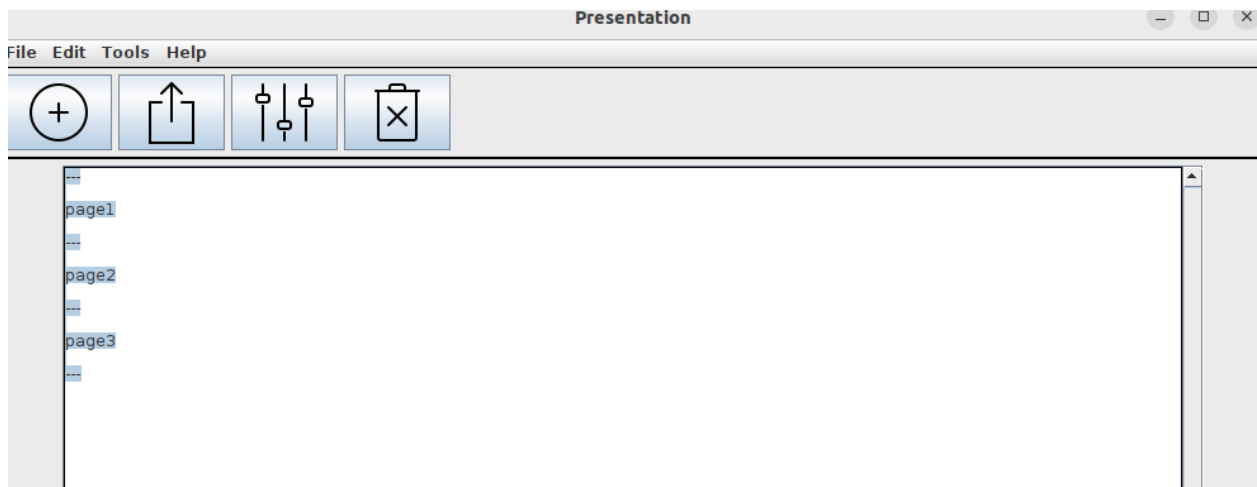

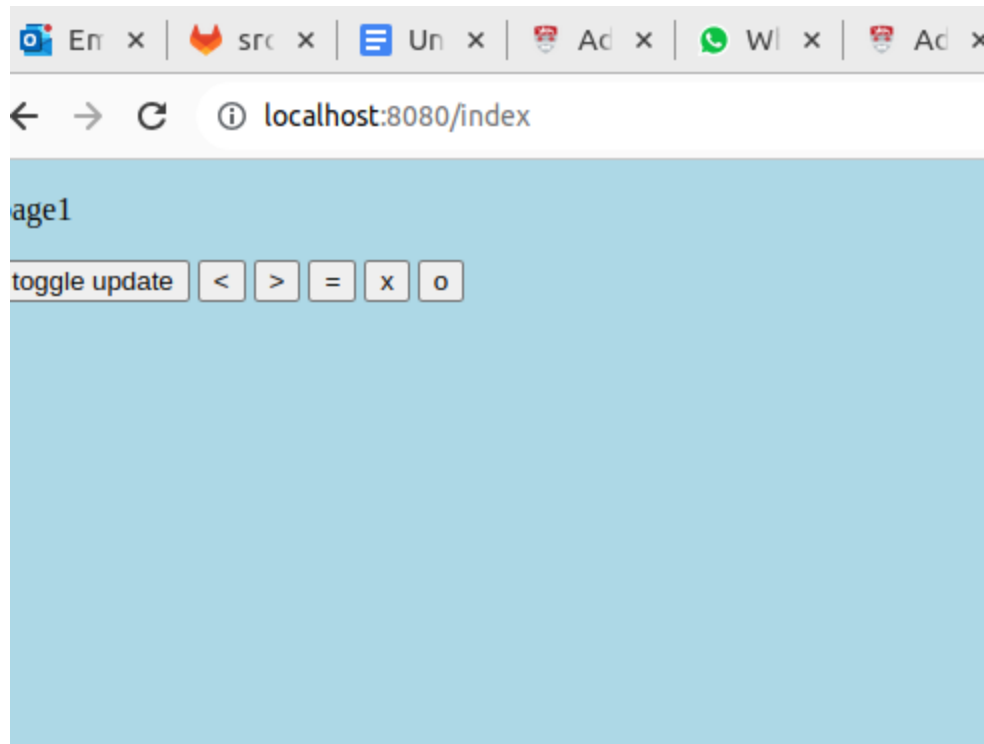

Separating pages currently working as expected

Backend currently ahead of frontend

Testing getPagesNum from SlidesProcessing.java

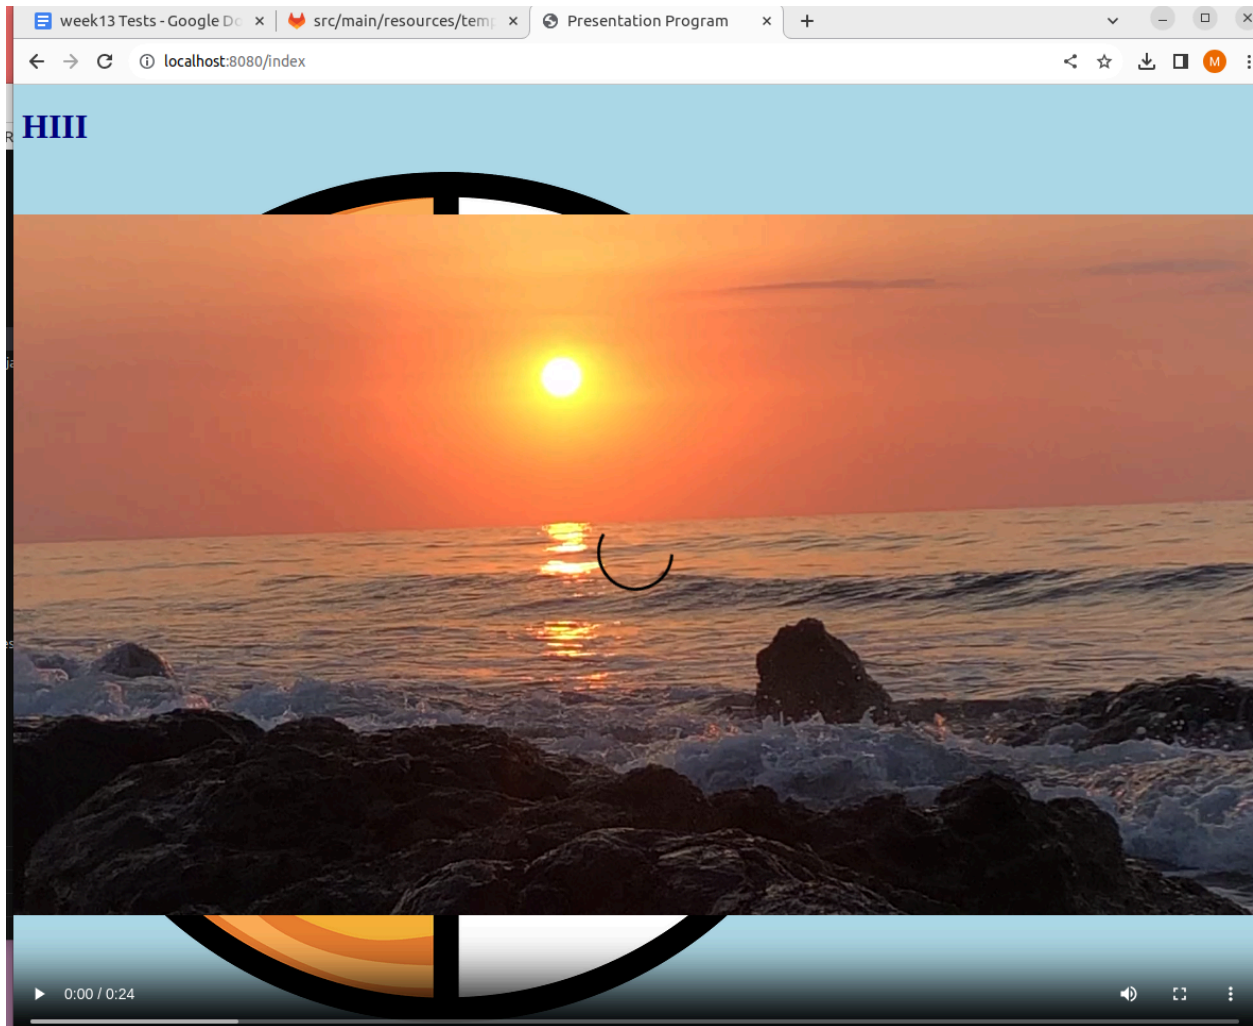

Should have 3 pages, now for test

This functionality works

Bug where video takes over entire screen

From this input

```
<h1>HIII<h2>
```

```
<p><p>
```

```
<p><a href="/videos?videoName=windChimes.mp4" title="Wind Chimes Video path">Wind  
chimes video path</a></p></div>
```

```
<video style="position: absolute; top: 0; left: 0; width: 100%; height: 100%;" controls>  
  <source src="/videos?videoName=seaWave.webm" type="video/webm">  
</video>
```

Must align video in correct position

If user does not enter the - - - operator to change page, the website glitches out not allowing you to press the button

test

Edit mod ON. Press space or click this button to activate presentation mod. Use ArrowLeft and ArrowRight to change slides. ArrowDown turns on dark mode.

These move up and down repeatedly

Can load .java files

Youtube videos not embedded within presentation site properly

[mr bean](#)

Edit mod ON. Press space or click this button to activate presentation mod. Use ArrowLeft and ArrowRight to change slides. ArrowDown turns on dark mode.

Should say edit mod OFF when turned off

Edit mod ON. Press space or click this button to activate presentation mod. Use ArrowLeft and ArrowRight to change slides. ArrowDown turns on dark mode.
